Save time with custom links, FTP-ed files, and apps that require an internet connection. Open them all from one simple click, no matter what the location. THE SIMPLEST WAY TO OPEN YOUR FAVORITE LINKS Simply Right-Click on your desktop, or any other window, and add a "Link". Create as many as you want! REAL EXAMPLE: Visit: www.google.com to enter a search query. Add the link: www.google.com in the Link column. NOTE: You can add FTP links to open any file or folder in your ftp server. You can add the link: "www.google.com" in the Link column. "www.yahoo.com" in the Link column. You can add ANY URL you want in the Link column, not just the ones we show here. Set your "Link" to launch your favorite "apps" You can change the Link to launch your favorite "apps" instead of a web site. Set your "App" to launch your favorite "apps" instead of a web site. What do you think of Biniware Run? We'd love to hear what you think in the comments section below! Post navigation Biniware Run is a small, portable utility that lets you access your favorite websites, programs, files and folders from one place. It adds a tiny circle on your desktop, which remains on top of all other windows and lists your favorite shortcuts when clicked. Sounds great! I've been looking for something like this for a while. I have some programs that take advantage of the url field and open them without having to search for it, but this would be awesome to have available, as well as being able to add ftp links. There's a lot of power in the application. One thing you can do with it is to create an icon shortcut on your desktop. For example, you can have it launch a game you like to play. It's a fun utility to have around, and I'm sure you'll enjoy using it.New studies on planet's growth have been published Planetary scientist's scientists have just conducted a new study of the Earth-size exoplanet Gliese 581g and discovered that the planet was growing over time,

Biniware Run Patch With Serial Key Free

Biniware Run is a small, portable utility that lets you access your favorite websites, programs, files and folders from one place. It adds a tiny circle on your desktop, which remains on top of all other windows and lists your favorite shortcuts when clicked. After setting up the application, you will notice a tiny red circle on your desktop. You can add shortcuts by either dropping files, folders and links directly onto the circle or from the program's settings. To access the configuration menu, just right-click the icon. You can add shortcuts to files and folders, as well as web links. These can be organized into multiple categories, and the application extracts each file and website's icon automatically. Take it with you wherever you go While an installer is used to set up the software, you can then move the folder to any other location without breaking the program's functionality. You can even store it on a portable storage device and use it on multiple PCs. If, for instance, you need to be able to access certain websites or system utilities quickly when switching to another computer, Biniware Run can prove very helpful. Offers quite a few customization options Aside from organizing the links, you can also change the appearance of the circle. You can customize its inner and outer color, size and opacity, as well as the border's thickness. However, it might have been useful if it were possible to hide/show the launcher shortcut using a hotkey, or at least toggle its "always on top" state. In short, Biniware Run is a well-designed utility that can save you quite a bit of time and effort in the long run. It lets you open files, folders and websites from an accessible shortcut on your desktop, and it can be customized extensively. G.Skill G.Skill is a well-known name in the world of RAM memory.
